Mission Statement

To link the gold-backed “Maori Electronic Gold (MEG) Monetary System” with Foreign Central Banks for International Offshore Settlements, whilst employing the Maori Central Bank Digital Gold Currency as legal tender

Overview

The Maori Central Bank of Aotearoa (MCBA) Electronic Structure

The Maori Central Bank’s innovative “**Maori Electronic “Gold (MEG)” Monetary System**”, guarantee a platform for international offshore currency settlements, the liquidation of financial assets and the exchange of large value currency instruments between the **MCBA** and Less Developed Countries (LDC), Central Banks. Interoperability of the **MEG Digital Bank** and the **Maori Digital Gold Currency** between diverse jurisdictions will produce significant fiscal efficiency gains, reducing reliance on costly correspondent banking networks and pre-funded Nostro and Vostro accounts, and, enhance LDC Nation economies.

The **MEG Monetary System** is driven by an advanced 100 PETAFL0P Super Computer IDC/IT technology, employing highly experienced management capable of driving the **MEG Digital Bank** and exploiting the **MEG Digital Gold Currency** focusing on trade and investment, powering key projects in Indonesia and in LDC Nations. The Maori Government’s key partners will drive and steer key projects in accordance with the Maori Government’s economic policies, aims and objectives.

The **MEG Monetary System** backed by gold, integrates a unique **MEG Digital Banking Architecture** and the **MEG Digital Gold Currency**, is also underpinned amongst numerous high-value asset and assets of the Fundem Group strategic alliance. In addition, the **MEG System** is politically compatible; counterfeit resistant; provides an integrated national identity method to alleviate concerns against money laundering and terrorist financing; guarantees 24hr real-time settlements all year round; low seigniorage costs; reduced intermediary management costs and processes adding superior functionality; a medium of exchange integrated for international payments of goods and services worldwide and

bolstered with intrinsic value assets retaining the cost for such goods and services, and, all circulated as a **Maori Central Bank Digital Gold Currency (MCBDC)** or simply stated, **Maori Gold**.

Maori Electronic Gold (MEG) Standard (“NEW GOLD STANDARD”)

MEG Monetary System, the **MEG Digital Banking Architecture** and the **MEG Digital Gold Currency** collectively boost the “NEW GOLD STANDARD”, that is physically backed by gold bullion ingots and USD held in custodial safekeeping at The World Bank, UBS Zurich, Bank of International Settlements, the Bank of England et al, and, H.M. Arikini Manukau is the legal owner.

“NEW GOLD STANDARD”/MEG System pilot model, combines precious metals & commodity values, cross collateralized assets and price indexing that are regulated via FIXED & FLOATING rates benchmarked via the **MEG Index posting system**. Interest rates are factored in based on **MCBA** macro-economic strategies and short, medium and long-term economic policy objectives. **MCBA** extensive Monetary Policies strengthen

the **MEG Digital Gold Currency**, Sovereign Bonds or **MEG** Treasury Bills/interest rates and investment strategies. And, the Monetary Policies and “NEW GOLD STANDARD” policy is only available to Maori Central Bank and Treasury Senior Management.

MCBA “MEG Pilot Business Model”

The “MEG Pilot Business Model” will inevitably employ USD, Euro, Yen & RMB etc Fiat currencies (TIER 4 currencies), as **MCBDC** for trade and settlements at the domestic and international level managed via the Sovereign Global Bank of Aotearoa (SGBA) international clearing, settlements, cutting house and trade platforms. **MCBAs** view to employ Fiat currencies as a **MCBDC** is due to the regular economic activity, awareness and acceptance in the financial markets worldwide.

Private, retail & wholesale banks, registered financial institutions, financial intermediaries and payment providers holding “**primary digital accounts**” or retail digital wallets will service end-users/customers directly. Underpinning Fiat

currencies through the **MEG Monetary System** provides a whole new dimension of economic, financial and monetary stability, opportunity and sustainability for the Maori Nation and LDC Nations as a whole.

Additionally, the **MEG Monetary System** electronically stores all digital data reflected as **Maori Electronic Digital Gold Currency**, on deposit with **MCBA's** registered financial institutions holding "**primary digital accounts**", managed and distributed via digital wallets, on electronic cards, devices or servers, and, the SGBA Bank's **MEG Digital Banking** trading platforms for goods and services.

Furthermore, at some time in the future the **Maori Digital Gold Currency** can be stored as digital bank deposits earning interest, investing in interest-bearing activities, the purchase of goods using digital wallets, debit cards, mobile payments, and, liquidated and settled through SGBA Bank's clearing house.

The **MCBA Digital Gold Currency** can only be redeemed in exchange for a top 5 Fiat currency of the day, via the Sovereign Global Bank of Aotearoa (SGBA), Warrior's Investment Bank and Fundem Global Banks, being the first International Banks to register with Maori Monetary Authority providing **MEG Digital Banking Services** worldwide.

MEG INDEX SYSTEM

MEG INDEX electronic posting board displays hourly/daily indices of current market values, foreign exchange currency rates, commodity & technology rates and precious metals rates based upon the "**MEG Monetary System Gold Standard's**" and FIXED & FLOATING rates.

Fiat currencies (TIER 4 currencies) are primarily considered political obligations with little to no intrinsic value. In contrast, commodities (TIER 2 currencies) holding numerous values are employed as a **MCBDC**. Each commodity/currency multiply their efficacy significantly by incorporating the guarantees of the **MEG Monetary System**, the advantages of the **MEG Digital Banking Architecture**, the value of the **Maori Gold Digital Currency** and the "**NEW GOLD STANDARD**" increasing the Bank's Monetary Base with redefined Fiat & Commodity values.

Crypto-currencies hold no intrinsic value and are deemed financial investment opportunities, consist of various financial gymnastic programs that can be employed via SGBA Bank's Payment Gateway Platform.

However, Crypto-currencies converted into the **MCBDC** as legal tender for global general ledger/usage requires a re-evaluation of the crypto-currency fundamentals, modus operandi and is not a priority of the Maori Central Bank.

Laws, Regulations & Monetary Policy

The Maori Government's 2008 Banking Finance Act and the 2008 Digital Currency Act employ innovative fiscal tools and mechanisms that govern and regulate the supercomputer/IT technology system, the **MEG Monetary System**, the **MEG Digital Banking Architecture**, and, boosts the **Digital Gold Currency** efficacy, its multi functions delivering daily real time transaction settlements worldwide, adding enormous benefits to the Maori Nation and all less developed nations (LDCs) members.

MCBA's Monetary Policies outlined herein are designed to guarantee short, medium and long term, financial, economic stability and sustainability, employing IT-cyber security, transparency, accountability, systemic risks management, anti-money laundering and macro-economic management. And, guaranteed trust from the sovereign issuer's assurance to remove credit risk and debt while adding stability with intrinsic value, via the **MEG Monetary System**.

Furthermore, such policies infuse trust in the **MEG Monetary System** and **Maori Central Bank Digital Gold Currency**, to maintain its purchasing power, operate as an international medium of exchange for those in the financial markets, for contracts enforcing trade and insolvency frameworks. And, institutional investors mandated to subscribe to the Maori Government's **MEG** Sovereign Currency denominated assets (**MEG** Treasury Bills) open market program.

MCBA's policies and fiscal expenditure model are under review, to underwrite sovereign currency-denominated public bonds and interbank lending of **CBDC** money for the distribution to the wider population. Liquidity risk would be removed,

as the central bank will issue new **CBDC** through the traditional means of procuring intrinsic value securities or assets to increase the money supply.

LDC Gov to Gov Alliances

The Maori Nation of Aotearoa is a less developed Nation (LDC), expanding its short to medium startup phase to facilitate investment strategies employed for strategic projects in Aotearoa, Indonesia and with all LDC Nations.

H.M. Arikinui Manukau, the Leader of the Nation has pledged his Family Assets to underpin the “**Maori Electronic Gold (MEG) Standard Monetary System**”, assets that are currently in custodial safekeeping at the World Bank, UBS, BIS in Switzerland. Such Family Asset accounts are currently undergoing a process of updating and restructuring and will be employed by H.M. Arikinui Manukau in 2020 to underpin and raise the living standards of the Indonesian people, the Maori Nation and LDC Nations as its priorities.

To advance the Maori Tribal Government’s strategic short-medium term objectives internationally, H.M. Arikinui Manukau has made an offer to purchase 100% ownership of Le Freeport Singapore security facility to serve as the Maori Government’s Central Bank head-quarters base in Asia. Registration with the Global Regulators will connect the **Maori Central Bank of Aoteroa (MCBA)** and the “**Maori Electronic Gold (MEG) Standard Monetary System**” to the Global Banking System, and registrations with the World Bank, United Nations, ICJ, the Singapore and Indonesia Governments to follow.

In addition, H. M. Arikinui Manukau as a Founding Member of BRICS (Brazil, Russia, India, China & Sth Africa) Asian Economic Foundation, **MCBA** will employ the “**Maori Electronic Gold (MEG) Standard Monetary System**” for international settlements and to create social, economic development for BRICS members, based in Korea.

MEG Cloud IDC Digital Banking Platforms

The photosynthesis or evolution of paper money currencies to electronic

digital currency platforms will become the norm employing calculated values to underpin fiscal economic development in the projected 8 or 9 monetary zones worldwide serving the interests of its regional stake holders. The **MEG Cloud IDC System** will serve the Pacific LDC Nations as one of the 8 or 9 global regional currencies.

The “**Maori Electronic Gold (MEG) Standard Monetary System**” can serve as a “**NEW GOLD STANDARD**” Globally via **MEG Cloud IDC System**, as the SGBA Bank provides trading API platforms for international settlements, clearance, liquidation of financial assets, trade and employing the “**Maori Central Bank Electronic Gold Currency**” as an investment currency for infrastructure projects in general.

The SGBA Bank employs multiple trading platform modules that operate independent API security firewall interface systems with international financial institutions, via the **MEG Digital Banking Architecture** & various block-chain technologies. The SGBA Bank’s platforms provide for retail, wholesale and private banking settlements of all foreign currencies, commodities, clearinghouse services in real-time 24hrs all year-round, while employing the **Maori Central Bank Digital Gold Currency** utilizing such financial mechanisms as;

Digital Banking:

- Administration management, currency market management, transaction management, asset transfer management, audit management, settlement management, flow report management, online customer services, surveillance management, security management and market analysis management;

Clearing & Settlement Services:

- Clearinghouse Services include processing and clearing Invoices, purchase orders, bills of lading, LCs, SBLCs and all other peripheral documents and instruments across all Industries locally, regionally and internationally.
- Management of commercial paper & governmental sovereign bonds as required;
